MEDIMOND INTERNATIONAL PROCEEDINGS
Foreword

The International Confederation for Cleft Lip and Palate and Related Craniofacial Anomalies is the most important International Cleft Association worldwide. Every four years, for 40 years professionals around the globe are gathered to discuss new techniques, standard protocols, requisites for establishment of Cleft Centers and more recently international volunteer missions around the globe. During the 2nd International Congress of the Confederation, held in Copenhagen in 1973, the pioneering work of Paul Tessier was highlighted and recognized. Interestingly, after more than 3 decades, the work of Paul Tessier remains as gold standard in craniofacial surgery for all of surgeons who dedicated their lives to this distinct subspecialty of Plastic and Reconstructive Surgery.

Cassio Raposo do Amaral, Honor President of this meeting and Lucy Dalva Lopes, current President of the Brazilian Association of Cleft Palate brought this Congress to Brazil after a very competitive bidding, during the 9th International Congress in Goteborg, in 2001.

On behalf of Brazilian Association of Cleft Palate, Fortaleza was chosen as a perfect venue to host the International delegates coming from overseas. Fortaleza is the capital of Ceará, located in the east coast of Brazil and well-known for its natural resources and marvelous cuisine.

The theme of this International Congress was carefully chosen; “Cleft and Craniofacial Care: Experience, Evolution and Innovation”, that indeed represents the final goals of a multidisciplinary team.

A lot has changed throughout four decades, since the first meeting held in Houston, Texas in 1969. However, the enthusiasm for the cleft cause remains the same. At this 11th Congress, we had more than 700 abstracts from 52 countries participating, which remarkably demonstrated the paramount International meaning of this Confederation.

We are honored to hommage the figure of Cassio Raposo do Amaral, whose leadership established the craniofacial field in Brazil and Paul Tessier, father of craniofacial surgery, who is represented here by his widow Mireille Tessier.

It is a privileged to present this proceedings that represents the outstanding work of well-known worldwide specialists, who offered the best of their work and experienced.

Cassio Eduardo Raposo do Amaral, M.D.
Index

Research and New Technologies

Preliminary Results of Maxillary Alveolar Cleft Repair using Recombinant Human Bone Morphogenetic Protein-2.
N. Alonso, DYS. Tanikawa, DL. Rocha, R. da Silva Freitas LW. Canan Jr., TO. Ozawa......... 1

Three-dimensional virtual and physical technologies in the treatment of craniofacial anomalies

Effects of Lactobacillus acidophilus strain L-55 on steroid-induced cleft palates in ICR mice

Distractions Osteogenesis and Orthognatic Surgery

Orthognathic Surgery in the Management of Occlusion for Patients with Cleft Lip and Palate

Long-term follow up of positional changes after maxillary distraction osteogenesis in cleft lip and palate children
Å. Kadono, S. E. Leonardo, Y. Sato, J. Iida ................................................................. 27

Skeletal Improvement and Stability of Craniofacial Distraction in Syndromic Craniosynostosis
E. Ko .................................................................................................................... 31

An Acoustic Study of Sibilant /s/ Before and After Maxillary Advancement Surgery in Patients with Cleft Lip and Palate
V. Pereira, J. Tuomainen, Ayliffe P., Mars M., Hay N., Sell D. ..................................... 35

No Dissection Mandibular Distraction.
A. Uribe-Rivera DMD, X.P. Reyna-Rodriguez DDS, J.A. Taylor MD, C.B. Gordon MD. ........... 41
Stability of le fort i osteotomy and bilateral sagittal split osteotomy with maxillomandibulary clockwise rotation in cleft patients
Ting Ting Wu/ Chiung Shing Huang ................................................................. 43

Pathways to Care As Advances In Craniofacial Surgery
Mutaz B. Habal ............................................................................................. 47

Craniofacial Surgery

3D Facial Asymmetry in Patients with Juvenile Idiopathic Arthritis involving the Temporo-Mandibular Joint
S. Demant, N.V. Hermann, T.A. Darvann, P. Larsen, M. Zak, H. Schatz, S. Kreiborg ........................................................................................................ 57

Neonatal Mandibular Distraction: A 7 year experience
Armando Uribe-Rivera DDS, X Pilar Reyna-Rodriguez DDS, Jesse Taylor MD, David Billmire MD, Christopher Gordon MD ........................................................................................................ 63

Variety of the clinical features in patients with hemifacial microsomia

Speech, language and auditory processing in children with cleft palate
AP Nicolielo, JRP Lauris, FR Carvalho, MR Feniman ........................................ 69

Speech Pathology

Development of a communication assessment protocol for young children with cleft lip and/or palate in mauritius
R. Gopal, B. Louw & A. Kritzinger .................................................................... 73

Investigation into the Japanese awareness of Cleft Palate Speech; - An assessment of articulation distortion-

Acoustic phonetic examination of speech from subjects with late primary palate repair
R. Perry, L. Ham, Á. Martínez, L. Bermúdez M.D., A. Lizarraga M.D. ................... 83

Surgical Orthodontic Treatment for Cleft Lip/Palate Patients
K. Moriyama, Y. Baba, S. Suzuki ........................................................................ 87

Orthodontia & Facial Growth Studies

Delayed hard palate closure. Long term results.
M. Velazquez .................................................................................................... 93
Dental Implants in Patients with Cleft Lip, Alveolus and Palate in Riga Cleft Lip and Palate Centre
I. Akota, U. Soboleva, B. Barkane ................................................................. 103

Shape Variation in Children with Oral Clefts
I. Bugaighis, P. O’Higgins, B. Tiddeman, C. Mattick, R. Hobson ......................... 107

Prenatal mandibular dimensions and growth studied by 3d ultrasound
N.V. Hermann, T.A. Darvann, K. Sundberg, Dr. Med., S. Kreiborg,
Dr. Odont., C. Joergensen .................................................................................. 113

Clinical evaluation of dental implant reconstruction of grafted alveolar clefts
in cleft lip and palate patients.
N. Moritani, K. Mishima, T. Ueno, T. Yamada, Y. Ikeya, A. Ota, D. Janune, T. Matsumura,
M. Wakimoto ...................................................................................................... 117

Occlusion after orthodontic treatment in patients with unilateral alveolar cleft
K. Ohkubo, T. Susami, K. Nagahama, N. Uchino, N. Ichikawa, M. Matsuzaki, Y. Mori,
T. Takato ............................................................................................................. 125

Treatment frequency and costs for orthodontic patients with unilateral cleft lip and palate

Maxillary arch growth of unilateral complete cleft lip and palate operated
simultaneous Cheilo-Palatoplasty, compare with Mucosal Flap method, and
Mucosal Graft and Flap method.

Cephalometric comparison of colombian patients between 3 and 16 years old
with unilateral cleft lip and palate and without clefts
Carolina Tellez, Sr., DDS Gloria Bautista, Biostatistics ........................................ 139

Physiologic surgery for functional repair of cleft lip and palate
David S Precious, Dean Emeritus .................................................................... 145

“Outreach Surgical Center Program Lima: A 15 years experience in Peru”
P. Rossell - Perry ............................................................................................... 151

Primary Cleft Lip and Palate Repair

Detailed quantification of 3d soft tissue nose asymmetry before and after primary lip repair in uclp infants
Darvann TA, MSc, PhD, Hermann NV, DDS, PhD, Larsen P, MSc Eng, Govier D, Kane AA MD,
Lo L-J MD, Kreiborg S, DDS, PhD, dr. odont. ..................................................... 157

The BOCA Cleft Lip Repair

A modified variant of the Noordhoff’s Triangular Vermilion Flap
A. Mengiste ......................................................................................................... 165
