International Conference on Pre-Hypertension & Cardio Metabolic Syndrome

PreHT
International Conference on Pre-Hypertension & Cardio Metabolic Syndrome
February 24-27, 2011, Vienna, Austria
Dear Colleagues,

It is our pleasure to welcome you to the international conference on Prehypertension and the Cardio Metabolic Syndrome.

Prehypertension is a disputable category of blood pressure defined by The seventh report of the Join National Committee as systolic and diastolic BP: 120 to 139 mm Hg and 85 to 89 mm Hg, respectively. It has also been defined as borderline hypertension and high normal hypertension by the ESH guidelines.

The new category of Prehypertension/ high normal hypertension is a continuum to hypertension and is emerging as an important and treatable risk factor for cardiovascular disease.

This unique PreHT conference will discuss features of this new “risk category”, as well as the established risk factors and treatments for cardiovascular disease. It will focus on the public health cardiovascular disease impact, identification, etiology and pathogenesis of Prehypertension as well as on intervention for preventing the adverse outcome of this very prevalent condition.

The conference high quality scientific program was designed to cover a wide range of compelling topics such as Hypertension, Diabetes, Dyslipidemia, Obesity and the Cardio Metabolic Syndrome.

We are proud to host the conference scientific committee which includes worldwide experts in the field.

The conference is also very proud to host Prof. Stevo Julius from Michigan University, USA as the conference honorary chairmen.

We wish you all attendees from around the globe an interesting and productive conference,

Sincerely,

Reuven Zimlichman
Co-chair

Herman Haller
Co-Chair

Daniel A. Duprez
Co-Chair

Basil S. Lewis
Co-Chair
